

6 TOP CHALLENGES IMPLEMENTING ELECTRONIC INSTRUMENT TRACKING

*Only 17% of IT Projects 'meet their objectives'

1 PROJECT RESOURCING

Long before a tracking software partner is chosen, key project decisions will be required. Wrong decisions made here will affect overall project success.

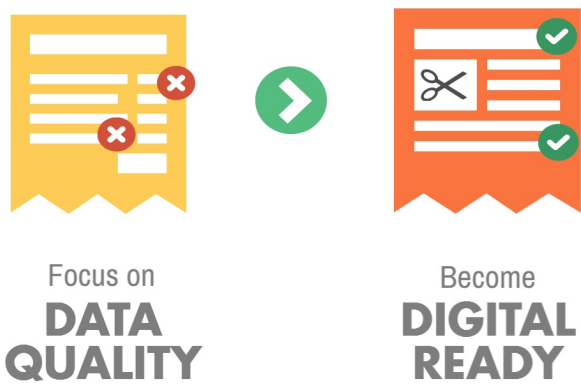

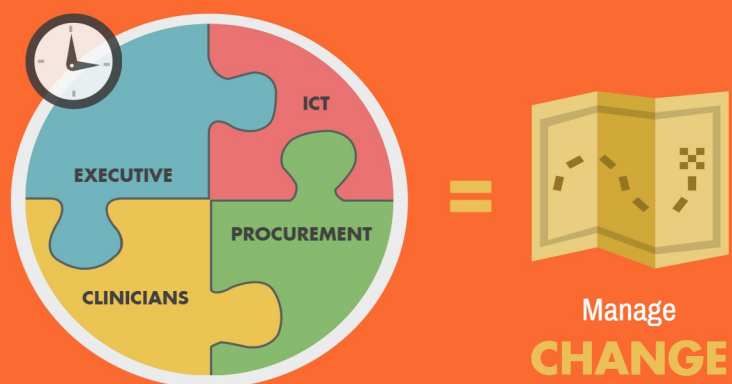

Hiring resources who have successfully implemented electronic tracking solutions at other facilities will give you a distinct advantage and prevent false starts.

2 STAKEHOLDER ENGAGEMENT

2

Representation is wide covering many disciplines. Overall there will be around 20-30 stakeholders.

Early and Frequent Involvement across all disciplines is critical for project governance, success and sustainability.

3 INVENTORY ACCURACY

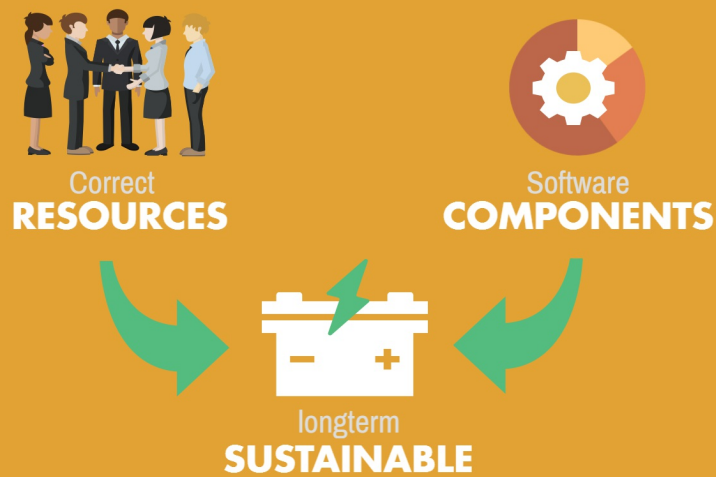

Often mistaken as the 'data load' activity performed by software vendors. This step is actually focused on repairing: data ambiguity, errors and omissions. It will raise the bar for data quality thresholds and promote strong data ownership, stewardship and governance.

Inventory data has a ripple effect on every processing event. It must be accurate.

4 SOFTWARE CONFIGURATION

4

Customers can unrealistically assume that vendor software will be easy to 'set-up'. However, seasoned ICT consultants know that care must be taken, as the smallest configuration change can severely impact many downstream processes.

1 You only have one chance to complete this activity - so make it count - 1st time !!

Effective TRAINING

Skilled **RESOURCES**

5 TRAINING

After configuring the optimum solution - solid investment in user training should follow. This will ensure operational processes are performed correctly and improve 'buy-in'.

Support should be 'dedicated' to facilitate the immediate resolution of any user problems and management enquiry. It should continue for a minimum of 4 weeks post implementation, this person will be your "go-to guru".

6 CONFORMANCE

6

To comply with national standards, notification of abnormal events is a given. Tracking systems have many pre-built reports which meet most needs, but not all. Having the correct resources means that you can analyse the data and discover the cause. Giving you the ability to supercharge your facility towards predictive analysis.

Useful data is worth it's weight in 'gold'. You just need to find it !!

Data Analysts are experts in finding abnormal events, root cause analysis and defining report parameters for your custom reports.

We believe that we can help healthcare achieve greater successes

Our innovations solve the problems facing many Sterile Processing Departments

I WANT TO...

FIX MY INVENTORY

Choose this - if you want your entire inventory recatalogued, removing data errors 5 times faster

OR

I WANT TO...

IMPLEMENT TRACKING

Choose this if you need - a holistic and vendor agnostic solution as your facility considers electronic tracking
